^Q Accredited by the Raad voor Accreditatie (registration number L201) and belong to Flexible scope. For the accreditation, other than AGF (Potatoes, Vegetables and Fruit) per product group, reference is made to DRF-260 Flexibele scope.

* These are degradation products and are not reported as standard according to EU regulation 396/2005. These degradation products can be reported on request.

** These analytes are only reported on request.

*** The reporting limit for egg and egg products is 0.003 mg/kg.

Exceptions reporting GC-MSMS

If certain components cannot be determined due to, for example, matrix effects, a comment will be made on the analysis report.

The reporting limits are indicative and are subject to change depending on the matrix and the circumstances of the analysis.

ECD: This pesticide is GC-MSMS qualified. Quantification and confirmation was determined with GC-MSMS.

The GC-MSMS analysis package-1 consists of a total of 314 components.

The accreditation other than fruit and vegetables, will be shown on DRF-260 Flexible scope.

Analysis package-2: Pesticides LC-MSMS (W3301/WVS-040)

^Q Accredited by the Raad voor Accreditatie (registration number L201) and belong to Flexible scope. For the accreditation, other than AGF (Potatoes, Vegetables and Fruit) per product group, reference is made to DRF-260 Flexibele scope.

* These are degradation products and are not reported as standard according to EU regulation 396/2005. These degradation products can be reported on request.

** These analytes are only reported on request.

*** Quantification takes place by means of a separate provision using a Single Residue Method.

**** Chlorothalonil-4-hydroxy is a breakdown product of Chlorothalonil. According to EU regulation 396/2005, this degradation product is only reported for products of animal origin, except honey.

Exceptions reporting LC-MSMS

If certain components cannot be determined due to, for example, matrix effects, a comment will be made on the analysis report.

The reporting limits are indicative and may change depending on the matrix and the circumstances of the analysis.

The LC-MSMS analysis package-2 consists of a total of 413 components.

The accreditation other than fruit and vegetables, will be shown on DRF-260 Flexible scope

- ^Q Accredited by the Raad voor Accreditatie (registration number L201).
^{*} Nitrate can be determined with 2 different analysis techniques. The pretreatment method is the same for both techniques. Nitrate is determined spectrophotometrically, unless the samples cannot be determined spectrophotometrically or are analyzed in the context of QS. QS requires laboratories to determine nitrate by means of ion chromatography.
^{**} Testing of other elements (heavy metals) is matrix and analysis dependent.
